DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 7 and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by JP 63-221517 (Copy of '517 and English Abstract are provided.).

3. '517 Teaches an electrical contact comprising:

a metallic substrate of copper;

a contact layer in the form of a gradient layer composed of indium and tin.

Regarding claim 9, the gradient layer has a thickness between 0.01 to 2 microns (first page, paragraph 2 of '517).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the

art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 10 to 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over '517 in view of Suzuki et al. (from previous action).

'517 teaches the claimed invention except for the gradient layer having a noble-metal cover layer.

Suzuki teaches an electrical contact having a contact layer and a cover layer. The cover layer is composed of gold (col. 3, line 45). Suzuki teaches that the gold cover layer has an excellent corrosion resistance and lubricity. It would have been obvious to one of ordinary skill in the art at the time of the invention to provide the contact layer of '517 with the gold cover layer as taught by Suzuki, since the gold cover layer would provide the contact layer of '517 with corrosion resistance.

Regarding claim 11, Suzuki teaches a range of 0.1 to 5 microns for the cover layer (col. 4, line 62).

Regarding claim 13, employing one of any known method for metal application would be obvious to one having ordinary skill in the art.

Response to Arguments

6. Applicant's arguments with respect to claims 7 and 9-13 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
